

## WORKPLACE SATISFACTION SURVEY

Any workplace design effort, whether tenant improvement, build-to-suit or remodel, must take into account a variety of factors to be successful. From the big picture elements; environmental, economic, cultural, to the details of mechanical systems, computer hook-ups, and wireless networks. But without the input of the people the workplace is designed to support, you may never reap the full productivity benefits.

RSP i-SPACE's web-based Workplace Satisfaction Survey is designed to be used in conjunction with design and planning efforts, to:

- Measure level of importance verses level of satisfaction for issues that relate to job function, workflow, and amenities.
- Compare staff opinions before and after a project to identify key issues and measure success in addressing them
- Provide an opportunity to create a more realistic picture of workplace needs through soliciting feedback from a broader base of staff in the development of effective workplace strategies.
- Identify broader trends by analyzing workplace needs according to department, location, job function, or even employee generation.
- Allow affected employees the opportunity to "have a voice," effectively building confidence, support and credibility to workplace recommendations.
